

1 FIND OR CREATE THE INTERPOLATION

Find or create an interpolation of the classic song you want to use.

LAYERED LOOP (e.g. 8 BARS)

Loop 1 – Drums

Loop 2 – Drums + Bass

Loop 3 – + Chords / Synth

Loop 4 – + Signature Sounds

Build a recognisable layered loop. This is the hack.

2 UPLOAD TO SUNO

Upload the interpolation into Suno.

Once Suno accepts it, you can take it in any direction.
House, orchestral, electronic, rock – whatever you want.

3 GENERATE INSTRUMENTAL BED

Use the interpolation to generate an instrumental bed in Suno.

Create an instrumental...

Generate

This becomes the foundation of your new song.

4 WRITE AND RECORD YOUR CHORUS

Put the instrumental on repeat. Create your own melody and write your lyrics.

- Record your chorus directly into Suno
- Generate
- This gives you the foundation of your song

5 CREATE AND ADD YOUR BRIDGE

Play chords and sing a new bridge melody (e.g. on your keyboard).

Bridge.wav

- Record to your phone
- Upload to Suno
- Bring it into your existing Studio project

6 OPEN IN SUNO STUDIO AND SPLIT STEMS

Open your project in Suno Studio and split the instrumental into stems.

This gives you control over individual elements.

7 FIX THE SUNO DRIFT

Suno can drift and add unwanted elements.

- Copy the sections where the drums and core elements are right
- Paste them where needed
- Turn Weirdness down to 0%
- (Optional) Use Max in Studio 2.0 to keep focus

8 ADD EXTRA INSTRUMENTATION

Add your own elements to enhance the track.

- Play additional bassline via MIDI
- Simplify or adjust parts
- Fatten up the bass or add other instrumentation

9 WORK ON THE VOCALS

Edit and enhance your vocals.

- Chop sections
- Thicken vocals
- Add backing harmonies
- Use effects to enhance your vocals

10 ADD EFFECTS

Use Studio 2.0 to generate effects for individual tracks.

Effects

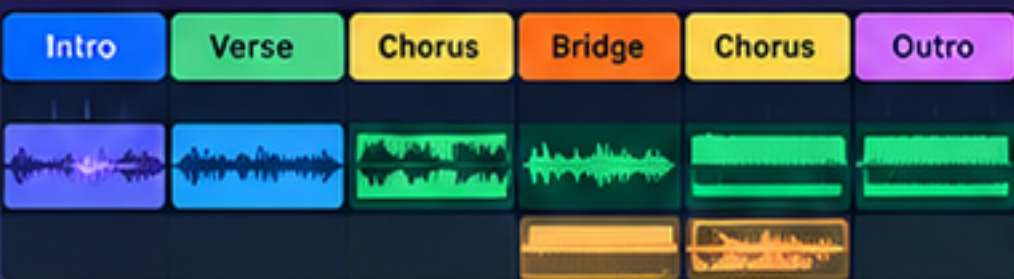

e.g. chorus, fx, reverb...

Generate Effect

- Describe the effect you want
- Add to individual tracks
- Experiment with different sounds
- Note: Melodic vocoder effects may be limited (often monotone)

11 ARRANGE YOUR SONG

Build your song structure.

- Copy and paste sections
- Move things around
- Build the structure you want

12 MIX AND FINALISE

Balance your stems, add effects and tweak until you're happy.

- Adjust levels
- Add final effects
- Listen and tweak

13 EXPORT YOUR TRACK

Do a final mixdown and export your finished song.

Export

This is your new song!
